

## *What's Your Current State of Inflammation?*

Every person deserves the truth about their state of health. Instead of waiting for symptoms to manifest and a disease process to be diagnosed, Thermography gives you a very early look at the most important indicator of a potential health problem - Inflammation.

Find out if you have inflammation before it becomes a chronic condition.

- Baseline Study visualizes current state of health and prioritizes areas of concern.
- Follow-up Studies monitor progress towards optimal health and wellness.
